

## 360° embedded security for business critical IT

Datum Farnborough delivers ultra secure, highly resilient co-location protected by multi-level access controls and stringent processes, set within a List-X controlled park.

### Security matters

In an increasingly inter-connected digital world, your clients, employees, and stakeholders expect 24x7x365 service. And against an increasing awareness of online risk, how can you ensure that you are keeping their critical data secure?

Whilst security policies and protocols are crucial to protect the valuable IT network, your organisation's critical infrastructure also has a role to play. No matter how sophisticated the firewall, how comprehensive the anti-virus solution nor how detailed the monitoring systems, if the hardware is hit, data is compromised.

Datum's 360° embedded security provides a solid

foundation to protect your critical infrastructure from the base up.

## Datum's multi-level access controls help secure our clients' infrastructure

Datum clients take security seriously—and our secure park location, our technology, our processes and our people are all aligned to ensure the physical foundation for their infrastructure is properly protected.

People, Processes and Technology combine to ensure total segregation of each client installation.

Working on the basis that when it comes to critical IT infrastructure, ignorance is not bliss, regular service reviews keep clients fully informed on all activity related to their racks and the data centre.

Organisations placing their trust in the ability of our data centre to support their security measures include those in:

- Security technology
- Reinsurance and underwriting
- Public sector security
- Defence/security/aerospace
- Finance
- Legal

Some installed clients can also provide Cyber Security supported by our secure resilient DC.

### Government-grade security and resilience

Multi-layered approach to security designed to meet the requirements of industry recognised certifications including ISO 27001 and PCI DSS. Highly secure campus location characterised by manned perimeter security and overlaid with our own data centre security to meet the highest standards.

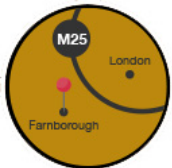

### 100% uptime service level agreement

Assurance against the risks of data centre downtime through 100% uptime SLA supported by our highly resilient co-location infrastructure that exceeds Tier 3 specifications. Committed and experienced operations team. Fully 2N power infrastructure ensures your co-location is always available.

### Cloud-connected co-location

Access to Applications Hosting, IT Services, Cloud Platforms, Network Services, Content Management and more. Direct connection to deliver increased security, ability to scale and reduced costs. Enablement for hybrid cloud strategies. Datum Cloud Hub provides searchable directory of co-located services.

### Strategic London-edge location

Secure campus location with excellent transport links conveniently located to the West of London, close to the M3, M4 and M25, and high speed 40 minute train time from Farnborough to London Waterloo. Excellent onsite services and connected latency to Slough and the City of London of less than 1 millisecond.

### Environmentally efficient operation

Adiabatic cooling solutions to maximise energy efficiency additionally supported by ISO 50001 accreditation and by the use of electricity generated only from renewable sources, and therefore exempt from the Climate Change Levy.

### Flexible capacity and service

Proactive service reporting and account management with dedicated client service manager to deliver a co-location service tailored to desired business outcomes. Detailed reporting includes BMS data for transparency and advanced DCIM to centralise monitoring and management.
